

Heading Sensor

TOWED ARRAY

- Heading Accuracy 0.5° RMS
- Operates in dynamic environments with 360 degrees continuous roll
- Available in 1.1 inch, 1.0 inch or 0.9 inch diameter
- 2500 psi pressure rated housing
- RS232 or RS422 digital output

Applications

- Towed Sonar Arrays
- Seismic Streamers
- Buoy Orientation
- Magnetic Compassing

CHS Series

The CHS series of high performance fully calibrated, small diameter heading sensors are ideally suited for towed sonar array and seismic streamer applications.

The CHS heading sensor is a solid-state "strapdown" configuration that avoids the performance limitations of typical gimbaled systems and offers improved reliability. A 3-axis fluxgate magnetometer and 3-axis micro-machined accelerometer are combined with digital signal processing electronics and fully integrated within a small diameter pressure rated housing. The digital signal processor samples and converts the internal sensor signals to 16-bit digital data and automatically compensates for

any temperature and misalignment effects. Factory calibration of scale factor, bias and misalignment angles is achieved by placing the heading sensor in high precision fixtures that apply rotational and magnetic fields. Scale factor and bias calibration coefficients are measured over the operating temperature range of the sensor.

The calculated roll, pitch, and azimuth angles are provided on a bidirectional serial data link that can be factory configured for RS232 or RS422 and is user programmable for data transfer rates of up to 9600 baud.
