BaySpec's WaveCapture™ FBGA Interrogation Analyzer is an integrated spectral engine simultaneously covering multiple wavelengths for precise and rapid fiber bragg grating (FBG) sensor system measurements.

The device covers wide wavelength ranges and provides simultaneous measurements at very fast response rates and excellent wavelength resolution. High reliability (MIL STD 810F shock and vibration) is achieved through a rugged mechanical design with no moving parts. Periodic calibration is not required. High speed Input/Output (I/O) is achieved through the use of Ethernet IEEE 802.3 interface.

The WaveCapture™ FBGA E-Series employs a highly efficient Volume Phase Grating (VPG®) as the spectral dispersion element and an ultra sensitive InGaAs array detector as the detection element, thereby providing high-speed parallel processing and continuous spectrum measurements. The signal is collimated with a micro lens and spectrally dispersed with the VPG®, and the diffracted field is focused onto an InGaAs array detector. The control electronics read out the processed digital signal to extract required information. Both the raw data and the processed data are available to the host.
Features

**KEY FEATURES**
- Ethernet interface
- Wide wavelength range
- Ultra-fast response time (up to 5kHz)
- Excellent wavelength repeatability and resolution
- Athermal design enabling battery-operated portable operation
- High reliability for use in harsh environment
- Compact, card-mountable design

**KEY BENEFITS**
- No moving parts
- Ultra reliable Volume Phase Grating (VPG®)
- Athermal (no TEC)
- Solid-state electronics
- Hermetically sealed
- Easy OEM integration

**APPLICATIONS**
- Real time fault detection and isolation in fiber optic sensing systems
- OEM module for portable handheld field test equipment
- Oil & Gas pipelines
- Mining
- Wind Energy
- Tidal Energy
- Marine vessels
- Aerospace
- Structural Health Monitoring
- Medical
- Sports
